

Functional Description

The design of the valve fitted with conical seat ensures hermetical closing in one direction and in the other direction of flow with a small pressure drop. The valve remains shut off closely if the pressure in channel (1) is equal to or higher than the pressure in channel (2) and no pressure and / or insufficient pressure only is exerted in the channel (3). As soon as the pressure in the channel (2) exceeds the pressure in the channel (1) including pressure caused by the spring the valve opens the flow from (2) to (1). If the liquid has to flow through the valve from (1) to (2) the control pressure should be introduced in the channel (3). As soon as this pressure attains a necessary value the control gate valve is shifted against the spring and moves the valve cone out of the seat. At calculating the control pressure it is necessary to take into consideration that pressure in the channel (2) will increase the control pressure by the same value multiplied by an effective differential area. This effective differential area has a value of 1 - 1/3 at a rate of control areas of 3:1.

As for appropriate basic surface finish the external parts are zinc coated.

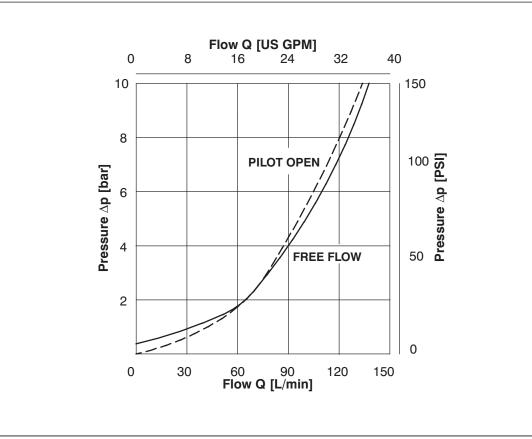

HA 5220

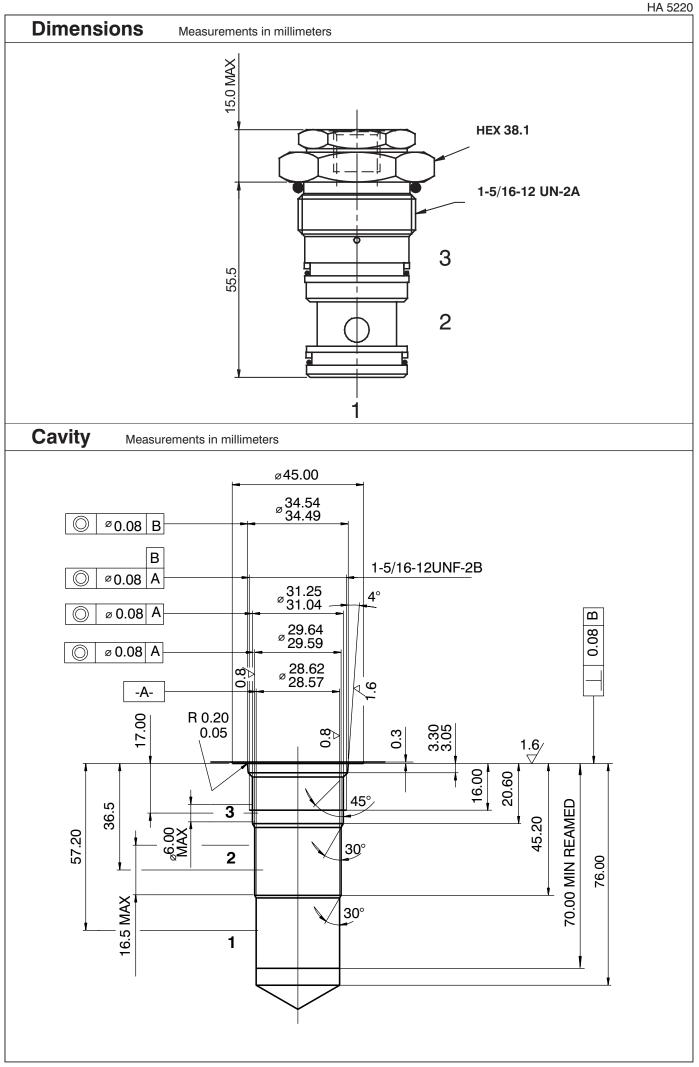

Ordering Code SC5H-S3/I Seals **Pilot Operated Check Valve** No designation NBR **Optional pilot seal Pilot ratio** No designation without seal 3 S Standard 3:1 wit seal **Technical Data**

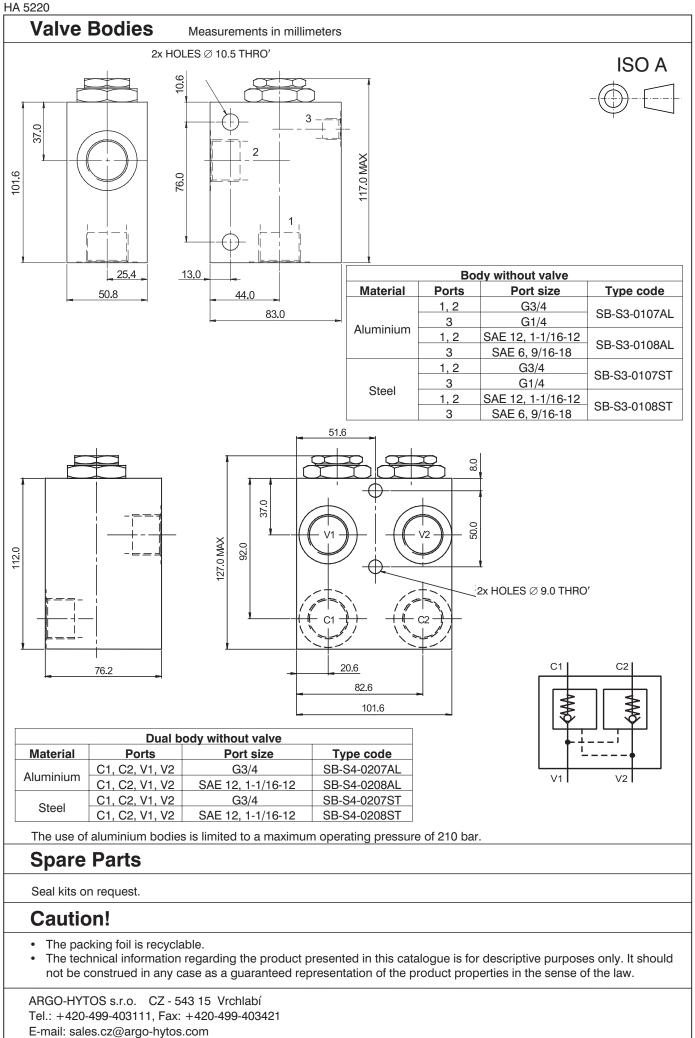

Cavity		1-5/16-12 UN-2A
Maximum flow	L/min	120
Pilot ratio		3:1
Max. pressure	bar	350
Pressure drops	bar	see ∆p - Q characteristics
Hydraulic fluid		Hydraulic oil (HM, HV) according to DIN 51524
Fluid temperature range	°C	-20 +90
Viscosity	mm²/s	20 400
Maximum degree of fluid contamination		According to ISO 4406, Class 21/18/15
Weight	kg	0.28
Maximum valve tightening torque in valve body or in control block	Nm	100 ⁺²
Mounting position		Unrestricted

∆p-Q Characteristics

Measured at $v = 40 \text{ mm}^2/\text{s}$
